In addition to being a great desktop computer, Mac mini powers everything from home automation to giant render farms. And now Mac mini has even more compute power for industrial-grade tasks. So whether you're running a live concert sound engine or testing your latest iOS or iPadOS app, Mac mini is the shortest distance between a great idea and a great result. Mac mini features high-performance 2666MHz DDR4 SO-DIMM memory for faster rendering, working with massive files, or running multiple virtual machines. Mac mini includes all-flash PCIe-based storage, with up to four times the read speeds of previous flash options. So you can load giant files and launch apps faster than ever. Mac mini features the Apple T2 Security Chip - second-generation custom Mac silicon designed by Apple to make Mac mini even more secure. The T2 Security Chip consolidates several controllers into one and includes a Secure Enclave coprocessor that provides the foundation for encrypted storage and secure boot capabilities. With a variety of ports, Mac mini is ready for a variety of workflow configurations. Thunderbolt 3 is a powerful and versatile port - and Mac mini has four of them. The HDMI 2.0 port delivers more bandwidth than its predecessor, so you can enjoy faster frame rates.
