## Commvault HyperScale - Subscription licence (3 years) - 1TB capacity - HPE Complete

A new approach is needed for organizations to solve their needs for greater resiliency, availability, scalability, and predictable performance for data management. No longer are traditional, scale-up infrastructures able to keep pace and meet the challenges of today's businesses. Stop risking your business by not being able to recover your data in the time it requires. Commvault is addressing today's IT business challenges with Commvault HyperScale Software, a complete solution built exclusively with Commvault software on a scale-out infrastructure. Through Commvault's Validated Reference Design Program it is easier to work with Hewlett Packard Enterprise (HPE) for the compute and storage and deliver a more robust data protection solution. By integrating the hardware and software, Commvault ensures the right infrastructure is in place to deliver a unified, modern data protection and management platform for you to better manage, protect, and use your data.
